

THE GIMP YARNS

Gimp yarns are produced with a central core usually viscose around which is twisted an unsupported Lurex® yarn. These yarns have a round cross section and are available either as bourdon gimp (fully covered) or space gimp with a gap between the Lurex® twist showing the core which may give an antique look, particularly with a black core.

If you wish to receive the full complete original Lurex® Gimp yarns colour card, please contact us at sales@lurex.com.
